REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The closest prior art of records, Spartz et al, US 5,878,036; Simons et al, US 7,039,046 ; Li et al; Ji et al, US 6,496,475 and Marin et al, US 6,501,768, fails singularly or in combination to teach or suggest the following:

A base station controller system comprising (inter alias):

a system controller to allocate selected combinations of specific resources from one or more of plurality of resource pools to provide desired call processing for respective ones of calls to and from a plurality of wireless access terminals, the base station controller organized as a hub subrack comprising a central switching resource and the system controller; and at least one processing subrack to carry the plurality of resource pools, each one processing subrack comprising resources from each of the plurality of resource pools and switching resources to communicatively couple the processing subrack to the hub subrack; the switching resources on each processing subrack and the central switching resource on the hub subrack together comprising a switching fabric to communicatively couple the hub subrack with each of the at least one processing subrack, the switching fabric comprising a communication switch on the hub subrack; a communication switch on each the at least one processing subrack; and a plurality of communication links between the communication switches on the at least one processing subrack and the communication switch on the hub subrack, as indicated in independent claim 9.

A method of structuring a base station controller system wherein call processing for each call being routed through the base station controller comprises performing a plurality of call processing functions, the method comprising (inter alias):

providing a plurality of resource pools, each one of the resource pools providing one of the plurality of call processing functions; providing redundant and independent access to each of a plurality of resource pools by interconnecting the plurality of resource pools through a configurable switching fabric;

organizing the base station controller system as a rack system comprising: a hub subrack providing centralized switching resources; and one or more processing subracks, each of the one or more processing subracks carrying at least a portion of the resources from each of the plurality of resource pools and rack switching resources to interface with the hub subrack; and optimizing resource assignments for a given call being routed through the base station controller system by assigning specific resources from one or more resource pools in the plurality of resource pools to minimize the number of the one or more processing subracks used to support the given call, as indicated in independent claim 21.

Conclusion

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
